Meet Your Gut & Skin Bacteria

- ▶ Enjoy the state of wonder
- ▶ Discuss the role of gut and skin bacteria in relation to health.
- ▶ Explore Gut-Lung Axis in COVID
- ▶ Describe the impact of mom's nutrition on baby's microbiome
- ▶ State strategies to improve intestinal health.

State of Wonder

Diabetes in America 2021 - CDC

- ▶ 13% of adults have diabetes (34 mil)
- ▶ 21% of those don't know they have diabetes
- ▶ 35% adults have pre diabetes (88 mil)
- ▶ 85% of those don't know they have prediabetes

Figure 1. Trends in age-adjusted prevalence of diagnosed diabetes, undiagnosed diabetes, and total diabetes among adults aged 18 years or older, United States, 1999-2016.

Notes: Diagnosed diabetes was based on self-report. Undiagnosed diabetes was based on fasting plasma glucose and A1C levels among people self-reporting no diabetes.

Data source: 1999-2016 National Health and Nutrition Examination Surveys.

CDC 2020 Report www.DiabetesEd.net

Diabetes in America

Figure 2. Age-adjusted, county-level prevalence of diagnosed diabetes among adults aged ≥20 years, United States, 2013.

Figure 3. Age-adjusted, county-level incidence of diagnosed diabetes among adults aged ≥20 years, United States, 2013.

Americans Living in Poverty

Figure 4. Percent of Adults Who are Overweight or Obese, 2014

U.S. Weight - 68% experiencing overweight or BMI >30

- ▶ 34% BMI 25-29
- ▶ 34% BMI 30 +
- ▶ 1/3 of all people with extra weight don't get diabetes
- ▶ We burn 100 cals less a day at work
- ▶ Overall, food costs ~ 10-15% of income
- ▶ Calorie Intake is on the rise

Quick Question

- ▶ What do you think is contributing to increasing prevalence of type 2 diabetes?
 - A. Processed foods
 - B. Increased sugar intake
 - C. Lack of exercise
 - D. Changes in gut bacteria
 - E. Environment
 - F. All of the above

Diabetes Education
SERVICES

Bacterial Cells Outnumber Human Cells 10 to 1

Diabetes Education
SERVICES

Gut Microbiome

- ▶ Part of endocrine axis
- ▶ Stabilized by 3 years of age
- ▶ Influenced by:
 - ▶ Birth method
 - ▶ Breast fed
 - ▶ Early Antibiotic use
 - ▶ Environment
 - ▶ Travel
- ▶ Help us
 - ▶ utilize energy
 - ▶ fight off invaders

Diabetes Education
SERVICES

How do our bacteria help us?

- ▶ Maintain physiological homeostasis and metabolism.
- ▶ Other benefits
 - ▶ pathogen displacement
 - ▶ immune system development
 - ▶ barrier fortification
 - ▶ vitamin production
 - ▶ nutrient absorption
- ▶ Forgotten organ

Quick Question

- ▶ How much does your gut bacteria weigh?
 - A. 24 ounces
 - B. 3 pounds
 - C. Less than 1 pound
 - D. 1.5 pounds

- ▶ How much does your brain weigh?

Diabetes Education
SERVICES

3 lbs of Microbes in our Gut

- ▶ Community of bacteria extra 'organ' "microbiome".
- ▶ Evolved together with our microbiome over millions of years.
- ▶ Ratios of these communities has changed over the past 30 years
- ▶ Mirrors global spikes in obesity, diabetes, allergic and inflammatory diseases

Diabetes Education
SERVICES

Bacterial Taxis?

**For better or worse, we're
"host-microbe ecosystems."
Microbes shape us from
without and also from within.**

Diabetes Education
SERVICES

Standard American Diet is SAD

- ▶ What are we doing to change these bacteria?
- ▶ 70% of food consumed is processed
- ▶ Low fiber, high sugar
- ▶ Intake of fruit and veggies decreasing
- ▶ We are starving our good bacteria.

Diabetes Education
SERVICES

Quick Question

- ▶ In general, how does immigrating to the U.S. impact individual's gut microbiota?
- A. Increased diversity due to new food exposure.
- B. A generational decline in bacterial diversity
- C. They experience a sudden increase in *Akkermansia muciniphila*
- D. Decrease in *helicobacter pylori*.

Diabetes Education
SERVICES

HEALTH

Just Months of American Life Change the Microbiome

Immigrants' gut bacteria "westernize" soon after they move to the U.S., which might influence obesity in immigrants and Americans alike.

OLGA KHAZAN NOV 1, 2018 Atlantic.com Nov 2018

A Hmong woman carries grass in Vietnam. (INSPIRED BY KHAM / REUTERS)

Diabetes Education SERVICES

Moving to America isn't good for your health

Researchers don't know if eating a less-healthy diet increases the rate of obesity *and* changes the microbiome, or if a less healthy diet changes the microbiome so it makes people experience higher BMI.

Atlantic.com Nov 2018

Diabetes Education SERVICES

Keeping our Microbiome Healthy

- ▶ Use antibiotics wisely.
- ▶ Reduce the number of the unnecessary Cesarean sections.
- ▶ Promote breastfeeding.
- ▶ Reduce antimicrobial products in our environment.
- ▶ Improve nutrition by increasing the amount of fiber and diversity of foods to promote microbial diversity and benefit health.
- ▶ Adding functional foods containing prebiotics, probiotics to diets.

Gut Health affects our overall health.

Diabetes Education SERVICES

Gut Neurons Direct Messaging

- ▶ Enteric Nervous System = Nervous System of Gut
- ▶ Sometimes referred to as “second brain”.
- ▶ Critical part of Gut-Brain Axis

[New way for gut neurons to communicate with brain.](#) Medical News Today Aug 2020

Diabetes Education SERVICES

Gut's Messaging Brain

- ▶ Gut has its very own nervous system
- ▶ Functions independently of brain or spinal cord
- ▶ Neurons in gut wall can activate spinal cord neurons
- ▶ Powerful mechanism to transmit info from gut to brain
- ▶ Viscerofugal neurons relay info from gut to sympathetic nervous system
- ▶ Brain can “sense” what is going in gut.
- ▶ Influences our decision, mood, general well being.
- ▶ Most serotonin, a chemical mood messenger, is found in gut
- ▶ Understanding how gut messaging controls other organs can lead to treatment breakthroughs

[New way for gut neurons to communicate with brain.](#) Medical News Today Aug 2020

Diabetes Education SERVICES

Gut Microbiome and Diabetes

Fig. 1. Interplay between diet and the gut microbiome. Regulatory role of diet and microbiota in healthy (left) and diabetic conditions (right) has different mechanisms. In T1D, the bacterial population in gut modulates gut permeability and signalling mechanisms, thereby initiating an autoimmune response. In T2D, dysbiosis due to carbohydrate hydrolysis causes low-grade inflammation and decrease in insulin sensitivity.

Plant & Fiber Diet = Less inflammation

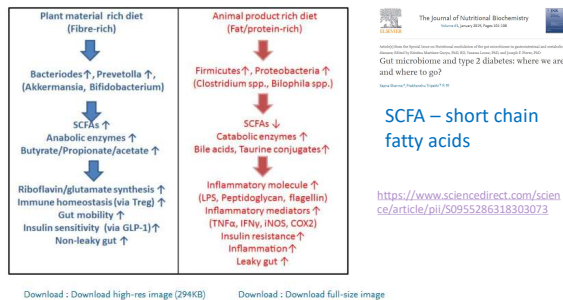

Fig. 2. Flowcharts representing the effect of diet pattern on bacterial population in the human gut. The flowchart on the left panel (blue) indicates fiber-rich diet and the right panel (red) indicates fat/protein-rich diet.

Metformin helps gut microbiota in diabetes

- Induces GLP-1 secretion
- Changes in *Bacteroidetes/Firmicutes* ratio
- Capacity to induce mucin expression similar to *Akkermansia muciniphila*
- Improves the metabolic profile by lowering tissue inflammation in the presence of extra weight

Especially increases *Akkermansia* and *Bifidobacterium*.

Diabetes Education SERVICES

Akkermansia Muciniphila

A. muciniphila in our mucus lining is inversely correlated with obesity and diabetes in both mice and humans.

Mucus lining protector and increases presence of short chain fatty acids.

High levels of A. muciniphila is associated with improved health.

"AKK" is associated with enhanced intestinal barrier function and incretin secretion from intestinal endocrine cells. Together, these actions suppress obesity, insulin resistance, and intestinal inflammation.

Deponnier C, Everard A, Druart C, et al. [Supplementation with Akkermansia muciniphila in overweight and obese human volunteers: a proof-of-concept exploratory study. Nat Med. 2019; doi: 10.1038/s41591-019-0495-2.](https://doi.org/10.1038/s41591-019-0495-2)

Pregnant Moms diet impacts baby's gut bacteria

[What you eat while pregnant may affect your baby's gut microbiota and growth](#) – Oct 21, 2020 Gut Microbiota for Health

- ▶ Mother's diet shapes gut microbiota during pregnancy, in birth and when breastfeeding
- ▶ Impact babies' gut microbial community and infant growth during first 18 months
- ▶ Disruption in gut colonization can lead to obesity, allergies and CV diseases later in life
- ▶ Diet is one of most powerful factors driving gut microbiota diversity

Diabetes Education SERVICES

The Study – 86 Baby Mom Pairs

- ▶ Pregnant women's diet was based on a high amount of dietary fiber, omega-3 fatty acids and polyphenols.

This Photo by Unknown Author is licensed under CC BY

- ▶ Pregnant women's diet with significantly higher intake of carbohydrates, saturated fatty acids and animal protein.

Diabetes Education SERVICES

Results after 18 mo's of Study

High fiber diet & other nutrients

- ▶ Greater presence of [Ruminococcus](#),
 - ▶ a type of bacteria that produce [butyrate](#)
 - ▶ Butyrate is a biomarker of gut health and is associated with anti-inflammatory properties.

Less healthy diet

- ▶ Diet mainly composed of carbohydrates, saturated fatty acids and animal proteins, showed a greater presence of *Prevotella*
 - ▶ an oral bacteria linked to an increased risk of disease and complications in pregnancy.
 - ▶ Infants had a higher risk of becoming overweight in the first 18 months.

Diabetes Education SERVICES

Study Implications

- ▶ A maternal diet high in fiber, vegetable protein and omega-3 acids has a significant effect on the baby's microbiome and contributes to a child's development and a health during the first months of life.

One of the best gifts a mother can give her newborn is a balanced, healthy and diverse gut microbiota, and the most efficient way to achieve that is through diet during pregnancy.

Humans Benefit from Nature

- ▶ Quiet: think tank of soul
- ▶ Trips to forest, enhance bodies immune system by increasing the number and activity of lymphocytes –

2008 Nippon Med School Tokyo

- ▶ Tranquility lowers BP, reduces muscle tension, decreases stress related illness and improves sleep.

Shinrin in Japanese means “forest,” and *yoku* means “bath.” *Shinrin-yoku* means bathing in forest atmosphere, or taking in the forest through our senses.

Diabetes Education SERVICES

Forest Bathing Steps

The key to unlocking the power of the forest is in the five senses.

- ▶ Let nature enter through your ears, eyes, nose, mouth, hands and feet.
- ▶ Listen to the birds singing and the breeze rustling in the leaves of the trees.
- ▶ Look at the different greens of the trees and the sunlight filtering through the branches.
- ▶ Smell the fragrance of the forest and breathe in the natural aromatherapy of phytoncides.
- ▶ Taste the freshness of the air as you take deep breaths.
- ▶ Place your hands on the trunk of a tree. Dip your fingers or toes in a stream. Lie on the ground. Drink

This is your sixth sense, a state of mind.

Now you have connected with nature. You have crossed the bridge to happiness.

Phytoncides – Immune Boosters

- ▶ Exposure to forests boosts our immune system.
- ▶ We breathe in phytoncides
 - ▶ airborne chemicals that plants give off to protect themselves from insects.
 - ▶ Phytoncides have antibacterial and antifungal qualities which help plants fight disease.
 - ▶ When people breathe in these chemicals, our bodies respond by increasing the number and activity of a type of white blood cell called natural killer cells or NK.
 - ▶ These cells kill tumor- and virus-infected cells in our bodies.
 - ▶ In one study, increased NK activity from a 3-day, 2-night forest bathing trip lasted for more than 30 days.
 - ▶ Japanese researchers are currently exploring whether exposure to forests can help prevent certain kinds of cancer.

Questions

- ▶ Does what we eat affect our skin microbiome?
- ▶ Does our skin microbiome affect our gut microbiome?

Diabetes Education SERVICES

Skin Microbiome and Cleansers

- ▶ Should we suds up less?
 - ▶ Showering uses lots of water takes time
 - ▶ Do we need all these cleaning solutions, plastics?
 - ▶ We have been sold on importance of “getting clean”
- ▶ Is this daily wipe-out of our envelope of bacteria
 - ▶ Unnecessary
 - ▶ Harming us?

<https://www.pinterest.com/pin/54817320449667694/>

Diabetes Education SERVICES

What is the Ideal Balance?

- ▶ From occasionally jumping in the river to daily shower.
- ▶ Skin immunity is achieved through interaction between the external and internal skin layers and compartments, which operate in balance with the skin colonizing microbes.

<https://www.origimm.com/skin-microbiome/>

Diabetes Education SERVICES

Cultural Norms and Hygiene

- ▶ Cleaning rituals associated with class and wealth signaling
 - ▶ Whitening teeth, wearing deodorant
 - ▶ enormous industry-complex of self-care, skin care, hygiene and cosmetics — which is barely regulated
- ▶ Hygiene
 - ▶ more scientific public health term
 - ▶ Avoidance or disease prevention behaviors
 - ▶ Brushing teeth, hand washing, cleaning open wounds, mask wearing

Diabetes Education SERVICES

Quote from Clean – Dr. Hamblin

- ▶ A steady barrage of exposure to microbes trains our immune systems on how and when to react
- ▶ Yet, our indoor lifestyle has altered the function and role of our primary immune system – the skin
- ▶ If we carry dirt, dust, mud it is considered that we are “unclean”.

Diabetes Education
SERVICES

Stop Killing All the Bacteria The Hygiene Hypothesis

- ▶ In studies, mouse raised in clean environment is higher risk for DM than one raised in dirty one
- ▶ “Clean living” may increase risk for autoimmune diseases
- ▶ Diabetes risk is higher in urban than rural settings
- ▶ Daycare, other early exposures, lower risk for DM
- ▶ Children exposed to dirt, farm animals, and other kids have less reactive immune systems

Diabetes Education
SERVICES

Over washing harms the skin?

- ▶ Hot water and body soaps strips away natural oils and healthy bacteria and dries skin and makes it more porous
- ▶ This makes the body more vulnerable to irritants and allergens
- ▶ Increases risk of autoimmune and other conditions:
 - ▶ Can lead to the atopic march - Progression from Atopic Dermatitis to Allergic Rhinitis and Asthma

Diabetes Education
SERVICES

Complex Interplay

- ▶ If acne, eczema and psoriasis are the result of an interplay between your immune system and the microbes on your skin
- ▶ Can we shift or protect the microbiome and help people through their flares or outbreaks?
- ▶ Use of “cleansing products, could make things worse by shifting your microbiome

GUT MICROBIOME AND SLEEP

All of the microbes that live in our intestines are known as the gut microbiome. Some even call it our “second brain.”

Taking special care of your gut health can have great effects on the quality of your sleep. This is true even if you are going through a stressful period which would normally disrupt your sleep length and quality.

HOW ARE SLEEP AND MICROBIOME CONNECTED?

Elderly get better sleep with better microbial composition. Better sleep showed a increase in *Verrucomicrobia* strain which is believed to be linked with better cognitive function.

Study authors hope that improving gut microbiome could lead to a new way of cognitive decline treatment in older adults.

Diversity matters for health

Find out how to maintain a diverse microbiota through diet

GUT MICROBIOTA FOR HEALTH by BSH

Although gut microbiota has a genetic component, diet, lifestyle, environment and antibiotics influence gut microbiota composition the most.

What you eat can impact the gut microbiota within 24 hours of a dietary change!

The more diverse the diet, the more diverse the microbiota.

How do you eat your way to a diverse microbiota?

Include dietary fibers that can be metabolically used by gut microbes

Consume and avoid artificial sweeteners, refined grains and processed meats.

Add probiotic foods

such as fermented milk, yogurt and kefir.

Choose a balanced amount of animal and plant-based proteins

plant-based (legumes, nuts and seeds) and animal-based (meat, fish, poultry, eggs and dairy products).

Include foods rich in omega-3 and omega-6 fatty acids

omega-3: salmon, flax seeds, walnuts and soy fish; omega-6: sunflower seeds, corn and vegetable oils.

Eat plenty of vitamins and minerals

found in a variety of plant foods, fish, nuts and vegetables.

vitamin D: mushrooms, fortified milk and cereals; vitamin K: leafy green vegetables, nuts and soybeans.

Diversity matters on the plate and in the gut!

Getting to Better Gut Bacterial Health

Eat more PREbiotics

- ▶ Foods with indigestible fibers that nourish the good bacteria:
 - ▶ High fiber foods like, whole grains, fruits, veggies, nuts
 - ▶ High in prebiotic fibers include: Jerusalem artichokes, onions, kale, Brussels sprouts, bananas, dandelion greens & more

PRObiotics

- ▶ These foods contain healthy bacteria like *Bifidobacterium* and *Lactobacillus*.
 - ▶ Yogurt, Kefir – look for “live or active cultures”
 - ▶ Fermented foods like: Sauerkraut, Kimchi, Miso soup, kombucha

Diabetes Education
SERVICES

12 Super Foods to Enjoy

- ▶ Beans
- ▶ Dark Green Leafy Veggies
- ▶ Citrus Fruit
- ▶ Sweet Potatoes
- ▶ Berries
- ▶ Garlic
- ▶ Tomatoes
- ▶ Onions
- ▶ Fish High in Omega-3 Fatty Acids
- ▶ Whole Grains
- ▶ Nuts
- ▶ Fat-Free Milk and Yogurt

Kefir – Fermented Milk

From the Turkish word *keyif*, which means “feeling good” after eating

Diabetes Education
SERVICES

GET Lots of Diverse Fiber Foods

Goal is 25 – 30 gms day

American Food Project Full Plate Diet

► Helps increase fiber in usual meals

Fiber is suddenly hip. Grandma, it turns out, was just ahead of her time.

100 Trillion Friends to Call Your Own

From way back when, to current time
man and bacteria have been intertwined.

Start with your head, it's a happening place,
there's staphylococcus all over your face.

Next up is gums, teeth and mouth,
You'll find streptococcus inside and out!

Now to your stomach, to keep the pH,
H. pylori is on the case!

Inside the intestines, 30 feet of tube,
3 pounds of bacteria digesting your food.

From Bacteroidetes to keep you lean,
to Firmicutes, a junk food digesting machine!

Prevotella another bug on the scene,
breaks down fiber, veggies and beans!

Lactobacillus is a newborn's friend,
lining birth canal from tip to end.

Down to your feet, in-between the toes,
that's where lots of pseudomonas grows!

Short chain fatty acids, you wanna keep them
around
Protects gut mucous lining from breakin' down

So here's my message, always nourish your gut
With fresh fruit, grains, veggies, beans and nuts

More kefir, miso, sauerkraut, kimchi
Less sugar and fast foods to keep away disease

Breast feed, get dirty, limit antibiotic use
Let newborns come out through the natural shoot

Be reassured that you're never alone
You've got 100 trillion friends to call your own!
