**Type 2 Diabetes
The Complicated Diabetes**

Objectives:

1. Type 2 – More than Hyperglycemia
2. Goals of Therapy
3. Common Meds for Type 2
4. Insulin in Type 2
5. Pumps in Type 2

Poll Question 1

▶ According to the CDC, what best describes the future prevalence of diabetes in the U.S.?

- a. 50% of people above the age of 20 will have type 2 diabetes.
- b. The rate of type 1 and type 2 diabetes will triple by the year 2050.
- c. 1 out of 3 persons will have type 2 diabetes by the year 2050.
- d. 1 out of 2 persons will have diabetes by the year 2050.

Diabetes in America 2015

- ▶ 29 million or > 9.3%
- ▶ 27% don't know they have it
- ▶ 37% of US adults have pre diabetes (86 mil)

Diabetes

CDC's Division of Diabetes Translation. National Diabetes Surveillance System available at <http://www.cdc.gov/diabetes/statistics>

Diabetes Education SERVICES

U.S. Weight - 68% overweight or obese

- ▶ 34% BMI 25-29
- ▶ 34% BMI 30 +
- ▶ 1/3 of all overwt people don't get diabetes
- ▶ We burn 100 cals less a day at work
- ▶ Overall, food costs ~ 10-15% of income
- ▶ Calorie Intake is on the rise

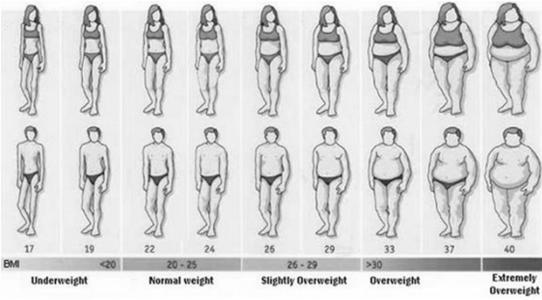

Average Daily Per Capita Calories Adjusted for Waste. Source: Economic Research Service of the United States Department of Agriculture (ERS) Data System.

Diabetes Education SERVICES

BMI Categories

Diabetes Education SERVICES

Type 2 in Kids

- ▶ 7 fold increase 1990
- ▶ 1 in 6 overweight kids (age 12- 19) have prediabetes.
- ▶ ~2,500 to 3,700 new cases in U.S. annually.
- ▶ Highest risk: very obese, minority, female, low socioeconomic status, limited education
- ▶ Environmental changes to urgently needed
- ▶ Treatment options – Metformin and Insulin

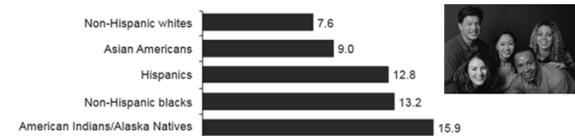

Diabetes Education SERVICES

Age-adjusted Diabetes Prevalence

20 yrs or older, by race/ethnicity— U.S. 20014

Age-adjusted* percentage of people aged 20 years or older with diagnosed diabetes, by race/ethnicity, United States, 2010–2012

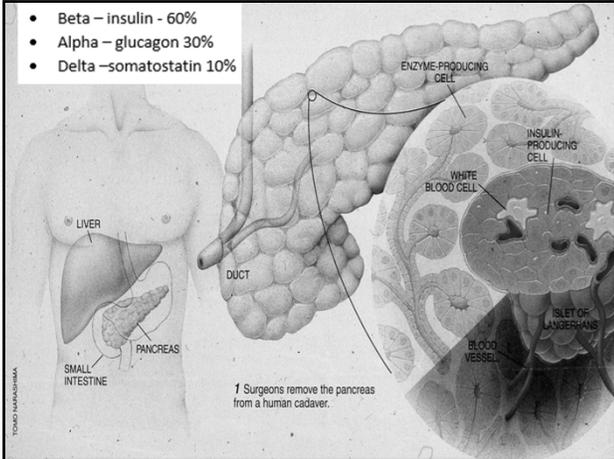

*Based on the 2000 U.S. standard population.
Source: 2010–2012 National Health Interview Survey and 2012 Indian Health Service's National Patient Information Reporting System.

- Among Hispanic adults, the age-adjusted rate of diagnosed diabetes was 8.5% for Central and South Americans, 9.3% for Cubans, 13.9% for Mexican Americans, and 14.8% for Puerto Ricans.
- Among Asian American adults, the age-adjusted rate of diagnosed diabetes was 4.4% for Chinese, 11.3% for Filipinos, 13.0% for Asian Indians, and 8.8% for other Asians.
- Among American Indian and Alaska Native adults, the age-adjusted rate of diagnosed diabetes varied by region from 6.0% among Alaska Natives to 24.1% among American Indians in southern Arizona.

Diabetes Education SERVICES

Hormones Effect on Glucose

Hormone	Effect
▶ Glucagon (pancreas)	⬆
▶ Stress hormones (kidney)	⬆
▶ Epinephrine (kidney)	⬆
▶ Insulin (pancreas)	⬇
▶ Amylin (pancreas)	⬇
▶ Gut hormones - incretins (GLP-1) released by L cells of intestinal mucosa, beta cell has receptors	⬇

Diabetes Education Services

GLP-1 Effects in Humans

Understanding the Natural Role of Incretins

GLP-1 secreted upon the ingestion of food

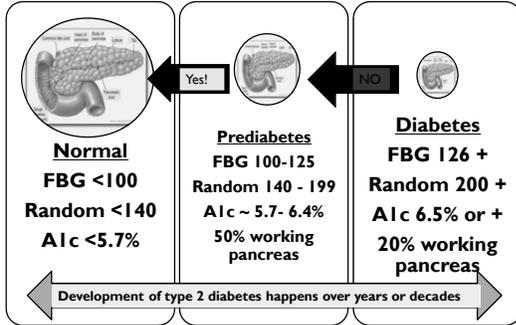

- Promotes satiety and reduces appetite
- Alpha cells: ↓ Postprandial glucagon secretion
- Liver: ↓ Glucagon reduces hepatic glucose output
- Stomach: Helps regulate gastric emptying
- Beta cells: Enhances glucose-dependent insulin secretion
- ↑ Beta-cell response

GLP-1 degraded by DPP-4 w/in minutes

Diabetes Education Services

Natural History of Diabetes

Diabetes 2 - Who is at Risk?

(ADA Clinical Practice Guidelines)

1. Testing should be considered in all adults who are overweight (BMI ≥ 25) and have additional **risk factors**:

- ▶ First-degree relative w/ diabetes
- ▶ Member of a high-risk ethnic population
- ▶ Habitual physical inactivity
- ▶ PreDiabetes
- ▶ History of heart disease

Diabetes Education SERVICES

Diabetes 2 - Who is at Risk?

(ADA Clinical Practice Guidelines)

Risk factors cont'd

- ▶ HTN - BP > 140/90
- ▶ HDL < 35 or triglycerides > 250
- ▶ baby >9 lb or history of Gestational Diabetes Mellitus (GDM)
- ▶ Polycystic ovary syndrome (PCOS)
- ▶ Other conditions assoc w/ insulin resistance:
 - ▶ Severe obesity, acanthosis nigricans (AN)

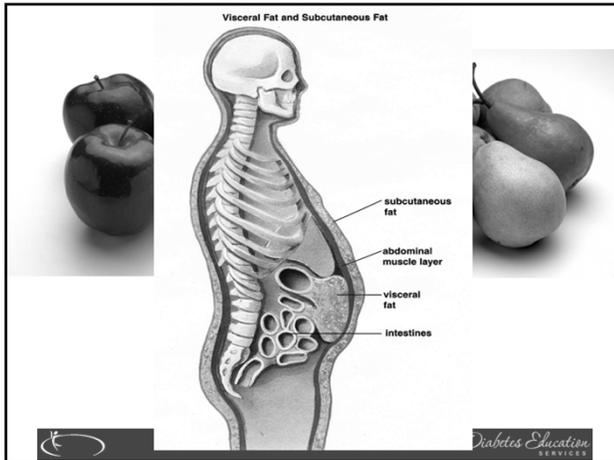

Diabetes Education SERVICES

Life Study – Mrs. Jones

Mrs. Jones is 62 years old, overweight and complaining of feeling tired and urinating several times a night. She is admitted with a urinary tract Infection. Her WBC is 12.3, glucose 237. She is hypertensive with a history of gestational diabetes. No ketones in urine.

- ▶ What are her risk factors, signs of diabetes
- ▶ What type of diabetes does she have?
- ▶ Does she have insulin resistance?

Factors Associated with Insulin Resistance

- ▶ Abdominal obesity
- ▶ Sedentary lifestyle
- ▶ Genetics / Ethnicity
- ▶ Gestational Diabetes
- ▶ Polycystic ovary syndrome
- ▶ Acanthosis Nigricans
- ▶ Obstructive Sleep Apnea
- ▶ Cancer
- ▶ Heart Disease

Diabetes Education SERVICES

Poll Question 2

- ▶ Which of the following BEST describes insulin resistance?
 - a. Lack of sufficient insulin receptors on fat and muscle cells.
 - b. Visceral adipose tissue.
 - c. A physiological condition where insulin becomes less effective at lowering blood glucose levels.
 - d. Excessive triglyceride levels

Diabetes Education SERVICES

Cardio Metabolic Risk - 5 Hypers -

- ▶ Hyperinsulinemia (resistance)
- ▶ Hyperglycemia
- ▶ Hyperlipidemia
- ▶ Hypertension
- ▶ Hyper"waistline"emia (35" women, 40" men)

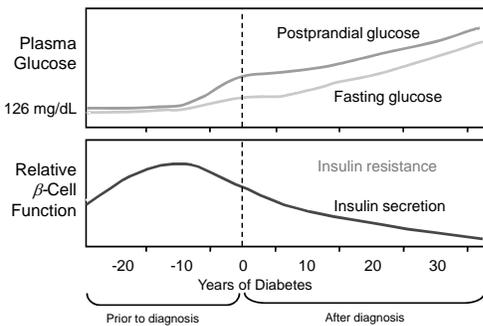

Manifestations of Insulin Resistance

Diabetes Education SERVICES

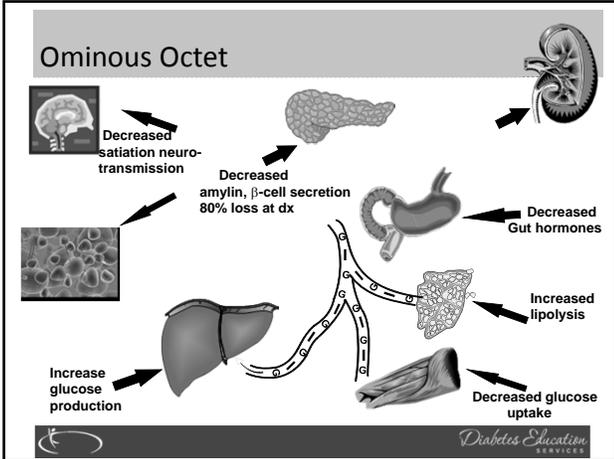

Natural Progression of Type 2 Diabetes

Adapted from Bergenstal et al. 2000; International Diabetes Center.

Diabetes Education SERVICES

What kind of Diabetes?

- ▶ Pt is 58, states she has had type 1 diabetes for 18 years. Quit smoking a year ago and gained about 20 lbs. BMI 25.
- ▶ Meds
 - ▶ Humalog 18-23 units before each meal
 - ▶ Lantus 28 units at bedtime
 - ▶ Metformin 500mg TID
- ▶ What tests would you recommend?

Diabetes Education SERVICES

Double Diabetes – An Increasing Problem

- ▶ Defined as a person who presents w/ features of both type 1 and type 2 diabetes.
- ▶ Someone with type 1 diabetes gains significant weight and manifests the clinical features of insulin resistance and type 2
- ▶ or in those with type 2 who develop autoantibodies to beta cells and manifest type 1 (esp in kids)

Diabetes Education SERVICES

What type of Diabetes?

- ▶ 72 Years old
- ▶ A1c 3 months prior 6.2%
- ▶ A1c now 13.9%
- ▶ BMI 24.5
- ▶ Lost about 10 pounds over last month

Diabetes Education SERVICES

Latent Autoimmunity Diabetes in Adults (LADA)

- ▶ Antibody positive to 1-2 of below
 - ▶ GAD-65 autoantibodies
 - ▶ Insulin Autoantibodies
 - ▶ Islet Cell antigen-2
- ▶ Adult Age at onset
- ▶ Usually need insulin w/in first 6 months of diagnosis
- ▶ Early insulin therapy may preserve beta cell function

Diabetes Care 26:536-538, 2003
Jerry P. Palmer, MD and Irl B. Hirsch, MD

Diabetes Education SERVICES

LADA Clinical Features Compared to Type 2

Feature	LADA	Type 2
▶ Age <50	63%	19%
▶ Acute hyperglycemia	66	24
▶ BMI < 25	33	13
▶ Hx of autoimmune dx	27	12
▶ Family hx autoimmune	46	35

Practical Diabetology March 08, Unger MD

Diabetes Education SERVICES

Gestational DM ~ 7% of all Pregnancies

- ▶ GDM prevalence increased by
 - ▶ ~10–100% during the past 20 yrs
- ▶ Native Americans, Asians, Hispanics, African-American women at highest risk
- ▶ Immediately after pregnancy, 5% to 10% of GDM diagnosed with type 2 diabetes
- ▶ Within 5 years, 50% chance of developing DM in next 5 years.

Diabetes Education SERVICES

ABC's of Diabetes

A1C

Blood Pressure

Cholesterol

Diabetes Education SERVICES

Glucose and BP Control Matter

- ▶ 1% decrease in A_{1c} reduces microvascular complications by 35%
- ▶ 1% decrease in A_{1c} reduces diabetes related deaths by 25%
- ▶ B/P control (144/82) reduced risk of:
 - ▶ Heart failure (56%)
 - ▶ Stroke (44%)
 - ▶ Death from diabetes (32%)

Lancet 352: 837-865, 1998

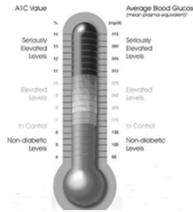

Diabetes Education SERVICES

Glycemic Targets

▶ Adult non pregnant A1c goals

- ▶ **A1c < 7%** - a reasonable goal for adults.
- ▶ **A1c < 6.5%** - may be appropriate for those without significant risk of hypoglycemia or other adverse effects of treatment.
- ▶ **A1c < 8%** - may be appropriate for patients with history of hypoglycemia, limited life expectancy, or those with longstanding diabetes and vascular complications.

Diabetes Education SERVICES

A1c and Estimated Avg Glucose (eAG) 2008

A1c (%)	eAG
5	97
6	126
7	154
8	183
9	212
10	240
11	269
12	298

Order teaching tool kit free at diabetes.org

eAG = 28.7 x A1c - 46.7 ~ 29 pts per 1%

Translating the A1c Assay Into Estimated Average Glucose Values – ADAG Study
Diabetes Care: 31, #8, August 2008

Diabetes Education SERVICES

“Legacy Effect”

▶ For participants of DCCT and UKPDS

- ▶ long lasting benefit of early intensive BG control prevents
 - ▶ microvascular complications
 - ▶ Macrovascular complications (15-55% decrease)
- ▶ Even though their BG levels increased over time
- ▶ Message – Catch early and Treat aggressively

Diabetes Education SERVICES

Poll 3

- ▶ What best sums up the ADA targets for those with diabetes?
 - A. A1c less than 7%, glucose less than 150
 - B. Before meal glucose 70-130
 - C. Post meal glucose less than 200
 - D. A1c less than 7%, post meal glucose <180

Diabetes Education SERVICES

ABCs of Diabetes –

- ▶ A1c less than 7% (avg 3 month BG)
 - ▶ Pre-meal BG 80-130
 - ▶ Post meal BG <180
- ▶ Blood Pressure < 140/90
- ▶ Cholesterol
 - ▶ DM and 40 yrs, start statin
 - ▶ HDL >40
 - ▶ Triglyceride < 150
- ▶ Exercise, Education
- ▶ Healthy Eating

Diabetes Education SERVICES

ADA Step Wise Approach to Hyperglycemia 2015

- ▶ Start with lifestyle coaching
- ▶ Add Metformin
- ▶ Next step: Metformin and add 1-2 more meds based pt and A1c
- ▶ If A1c 9% or more
 - ▶ 3 meds (ie Metformin, glyburide and Januvia)
 - ▶ Metformin plus basal insulin / GLP-1 Agonist
 - ▶ Basal/Bolus – Multiple daily injections (MDI)

Diabetes Education SERVICES

Metformin – 1st agent of choice

- ▶ **Action:** decrease hepatic glucose (glycogen)
- ▶ **Metformin (Glucophage)**
 - ▶ Starting dose: 500 BID, max 2500mg daily
 - ▶ Metformin XR - extended release – less GI upset
- ▶ **Efficacy:**
 - ▶ Decrease fasting plasma glucose 60-70 mg/dl
 - ▶ Reduce A1C 1.0-2.0%
- ▶ **Benefits / Issues**
 - ▶ Cheap, no weight gain; some lose weight, lowers LDL, no hypo
 - ▶ Not indicated if creat > 1.4-1.5 or GFR < 60 (cleared by kidney)

© Copyright 1999-2015, Diabetes Educational Services, All Rights Reserved.

Diabetes Education
SERVICES

Sulfonylureas - Squirts

- ▶ **Action:** Increase endogenous insulin secretion throughout day
- ▶ **Efficacy:**
 - ▶ Decrease FPG 60-70 mg/dl
 - ▶ Reduce A1C by 1.0-2.0%
- ▶ **Side Effects:**
 - ▶ Weight gain, hypoglycemia
- ▶ **Benefits:**
 - ▶ Cheap, effective

Diabetes Education
SERVICES

DPP-4 Inhibitors – “Incretin Enhancers”

Januvia (sitagliptin) – Tradjenta (linagliptin)
Onglyza (saxagliptin) Nesina (alogliptin)

- ▶ **Action:**
 - ▶ Increase insulin release w/ meals
 - ▶ Suppress glucagon
- ▶ **Dosing:** Januvia – 100mg a day
Onglyza – up to 5mg a day
Tradjenta – 5mg a day
Nesina – up to 25 mg a day
- ▶ **Efficacy:** Decreases A1c by 0.6 -0.8%
- ▶ **Benefits/ Issues:** weight neutral, no hypo, few side effects. Expensive

Diabetes Education
SERVICES

Incretin Mimetics

Byetta, Bydureon, Trulicity, Tanzeum

- ▶ **Action (synthetic gut hormone)**
 - ▶ Insulin release in response to meal
 - ▶ Slows gastric emptying
 - ▶ Causes Satiety – promotes wt loss
 - ▶ Preserves Beta Cells

▶ Details:

- ▶ Daily and long acting version - 1x week injection
- ▶ **Efficacy:** Decreases A1c by 0.5 – 1.6%, wt by 3lbs +

- ▶ **Benefits/Issues** – wt loss, no hyp. Expensive, N/V
 - Pancreatitis Warning – report signs immediately

Diabetes Education SERVICES

SGLT2 Inhibitors- “Glucoretics”

- ▶ **Action:** “Glucoretic” decreases renal reabsorption in the proximal tubule of the kidneys (reset renal threshold and increase glycosuria)

Decreases Glucose Reabsorption

SGLT2 Inhibitors

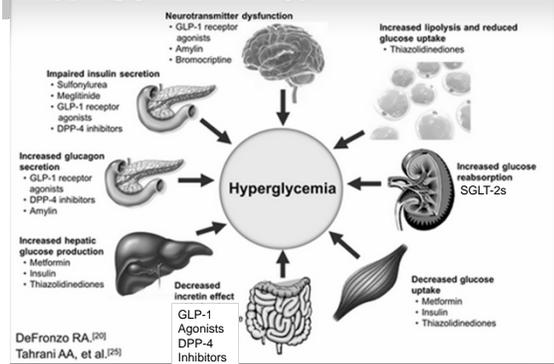

<ul style="list-style-type: none"> • Decrease glucose reabsorption in kidneys • “glucoretic.” 	Canagliflozin (Invokana)	100–300 mg once daily
	Dapagliflozin (Farxiga)	5–10 mg once daily
	Empagliflozin (Jardiance)	10–25 mg once daily

- ▶ Benefits: Lowers A1c 0.7 – 1.5%, lowers wt 1-3 lbs, no hypo
- ▶ Issues: Can initially lower GFR, monitor kidney function and lytes. Watch for hypotension/ GU infections. Expensive

Diabetes Education SERVICES

Hyperglycemia in Type 2 Diabetes

Diabetes Education SERVICES

More than 200 units a day?

Medscape

Source: Am J Health-Syst Pharm © 2010 American Society of Health-System Pharmacists

Consider u-500 High Potency Insulin

5 x's the concentration of u100

- ▶ 500 units per mL vs 100 units per mL
 - ▶ How much- When converting from u100?
 - ▶ Take total daily dose and divide by 5
 - ▶ 200 units a day/5 = 40 units a day of u500
 - ▶ 300 units a day/5 = ____ units a day of u500
 - ▶ 20 mL a vial. 500 units per mL= 10,000 units/vial
 - ▶ Costs ~ \$400-\$1,200 per vial – less expensive unit for unit?
 - ▶ Less volume

U-500 Insulin: When More With Less Yields Success: *Diabetes Spectrum* March 20, 2009 vol. 22 no. 2 116-122

Diabetes Education SERVICES

U-500 Insulin Caution

- ▶ High alert medication
 - ▶ Protect against hypoglycemia
- ▶ Confusing to convert dose and maintain accuracy
- ▶ Off label use for insulin pumps

Diabetes Education SERVICES

Type 2 Pump Candidates?

- ▶ Severe insulin resistance
- ▶ Poor glycemic control despite sufficient insulin titration and adherence to diet and exercise.
- ▶ Has ability to cope with pump with absence of cognitive or operative disability
- ▶ Personal willingness and ability to monitor blood glucose levels.

care.diabetesjournals.org

DIABETES CARE, VOLUME 36, SUPPLEMENT 2, AUGUST 2013 S219

Diabetes Education SERVICES

If you are already insulin resistant, why give more insulin?

- ▶ Yes, type 2 diabetes is a situation of insulin resistance, but also insulin deficiency
- ▶ When pts are glucose toxic (BG in the 300s), they may initially require higher doses of insulin, but as toxicity diminishes, insulin requirements diminish
- ▶ One strategy to overcome insulin resistance is through physiologic insulin replacement therapy.
- ▶ The pump helps to achieve glucose control with less insulin

Diabetes Education SERVICES

Quality of Life - QOL

- ▶ Older adults – MDI or CSII had similar quality of life scores
- ▶ Younger Adults- CSII improved QOL scores
- ▶ Less hospitalization and ER room visits

care.diabetesjournals.org

DIABETES CARE, VOLUME 36, SUPPLEMENT 2, AUGUST 2013 S219

Diabetes Education SERVICES

Summary of Benefits- Opt2mise Study

- ▶ No increase rate of hypo as compared to multiple daily injections
- ▶ Insulin dose cut by ~ 20% when using pump
- ▶ A1c decreased by 0.7% compared to MDI
- ▶ Results in cost savings
- ▶ Less hospital and ER Visits

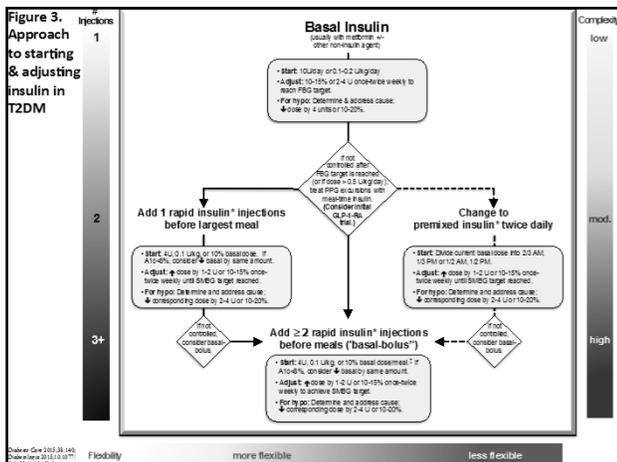

Diabetes Education SERVICES

Case Study

- ▶ 38 yr old,
- ▶ BMI 52, Weighs 200kg
- ▶ A1c – 10.2%, BG 290s for mos
- ▶ Insulin – 100 units Lantus
- ▶ Oral Meds: max dose glipizide + metformin
 - ▶ MD is contemplating starting her on insulin pump
 - ▶ Stop glipizide.
 - ▶ Continue Metformin to promote glycemic control and limit weight gain.
- ▶ Use ADA Algorithm to determine dosing

Diabetes Education SERVICES

ADA Algorithm to determine dose

- ▶ BMI 44, Weighs 200kg
- ▶ A1c – 10.2%, BG 290s for mos
- ▶ Insulin – 100 units Lantus
- ▶ Basal 100 units of Lantus
 - ▶ For safety $100 \times .75 = 75$ total units (AACE)
 - ▶ $75 \text{ units}/24 \text{ hours} = 3.13$ units per hour
- ▶ Bolus – start with largest meal
 - ▶ 10% of basal or $0.1 \text{ u}/\text{kg} = 10$ -20 units bolus then add additional meal boluses as needed.

Diabetes Education SERVICES

Based on Body Weight

- ▶ BMI 44, Weighs 200kg
- ▶ Total daily dose options:
 - ▶ Current body weight $\times 0.5 = 100$ units
 - ▶ Current body weight $\times 0.8 = 160$ units
- ▶ Basal = 0.5 of daily dose / 24 hrs
 - ▶ $100 \times 0.5 = 50$ units $50/24 \text{ hrs} = 2.1$ units an hour
 - ▶ $160 \times 0.5 = 80$ units $80/24 \text{ hrs} = 3.3$ units an hour
- ▶ Bolus = the other half/ 3 meals
 - ▶ $50/3$ meals = 16.6 units per meal
 - ▶ $80/3$ meals = 26.6 units per meal
- ▶ Or carb counting + correction?

Diabetes Education SERVICES

Best Approach Based on Individual

- ▶ In a French study, better glycemic control was achieved using:
 - ▶ 1 or 2 basal rates
 - ▶ Fixed bolus dosages
- ▶ Unnecessarily complex regimens may serve as a deterrent for some patients

Insulin Pump for Type 2 Diabetes

Use and misuse of continuous subcutaneous insulin infusion in type 2 diabetes

Yves Ruyss, MD,
Olivier Gonnard, MD

In contrast to these results, one may
disputed aggressive studies with insulin

care.diabetesjournals.org

DIABETES CARE, VOLUME 36, SUPPLEMENT 2, AUGUST 2013 S214

AACE Calculations for Insulin Pump Settings

Method 1.
Pre-Pump Total Daily Dose (TDD)
Pre-Pump TDD x .75

Method 2.
Patient Weight
Wt kg x .5 or lb x .23

Clinical Considerations on Pump TDD
-Average values from Method 1 & 2
-Hypoglycemic patients → start at lower value
-Hyperglycemic, elevated A1C, or pregnant → start at higher value

Clinical Guidelines

Basal Rate
(Pump TDD x .5) / 24 h

Carb Ratio
450 / TDD

Sensitivity Factor / Correction
1700 / Pump TDD

-Start with 1 basal rate, adjust according to glucose trends over 2-3 days
-Adjust to maintain stability in fasting state (between meals & during sleep)
-Add additional basals according to diurnal variation (dawn phenomenon)

-Adjust based on low-fat meals with known carbohydrate content
-Acceptable 2-h post-prandial rise is ~60mg/dL above pre-prandial BG
-Adjust carb ratio in 10%-20% increments based on post-prandial BG

ALTERNATE METHODS
-Carb Ratio: (6x Wt in kg / TDD) or (2.8 x Wt in lbs / TDD)
-Fixed Meal Bolus = (TDD x .5) / 3 equal meals (not carb counting)

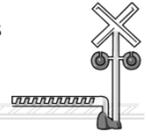

-Sensitivity Factor is correct if BG is within 30 mg/dL of target range within 2 hours after correction
-Make adjustments in 10%-20% increments if 2-hr post-correction BGs are consistently above or below target

TDD: total daily dose
BG: blood glucose

No one is Unmotivated

.... to lead and long and healthy life

- ▶ **These are the 3 usual Critical Barriers**
 - ▶ Perceived worthlessness
 - ▶ Too many personal obstacles
 - ▶ Absence of support and resources
